

**Amendments to the Claims:**

The listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claims 1.-10. (Cancelled)

Claim 11. (New) Apparatus for reducing electromagnetic radiation reflected from at least one object in the direction of at least one electromagnetic radiation receiver, the apparatus comprising an array, provided between each object and receiver, of at least one substantially reflective panel, each panel arranged such that the array reflects and disperses incident electromagnetic radiation away from each receiver.

Claim 12. (New) Apparatus according to claim 11 wherein the array of panels is attached to an outer surface of each object.

Claim 13. (New) Apparatus according to claim 12 wherein the panels are made of material substantially reflective to electromagnetic radiation.

Claim 14. (New) Apparatus according to claim 13 wherein at least one of the panels is substantially absorptive to electromagnetic radiation.

Claim 15. (New) Apparatus according to claim 14 wherein the panels are generally planar.

Claim 16. (New) Apparatus according to claim 14 wherein the panels are generally curved.

Claim 17. (New) Apparatus according to claim 15 wherein the panels are irregular in shape.

Claim 18. (New) Apparatus according to claim 16 wherein at least one of the panels has a substantially reflective multi-faceted surface.

Claim 19. (New) Apparatus according to claim 17 wherein at least one of the panels has a substantially reflective multi-faceted surface.

Claim 20. (New) Apparatus according to claim 11 wherein the panels are made of material substantially reflective to electromagnetic radiation.

Claim 21. (New) Apparatus according to claim 20 wherein at least one of the panels is substantially absorptive to electromagnetic radiation.

Claim 22. (New) Apparatus according to claim 21 wherein the panels are generally planar.

Claim 23. (New) Apparatus according to claim 21 wherein the panels are generally curved.

Claim 24. (New) Apparatus according to claim 22 wherein the panels are irregular in shape.

Claim 25. (New) Apparatus according to claim 24 wherein at least one of the panels has a substantially reflective multi-faceted surface.

Claim 26. (New) Apparatus according to claim 11 wherein the panels comprise a substrate having a substantially reflective coating.

Claim 27. (New) Apparatus according to claim 26 wherein at least one of the panels is substantially absorptive to electromagnetic radiation.

Claim 28. (New) Apparatus according to claim 27 wherein the panels are generally planar.

Claim 29. (New) Apparatus according to claim 27 wherein the panels are generally curved.

Claim 30. (New) Apparatus according to claim 28 wherein the panels are irregular in shape.

Claim 31. (New) Apparatus according to claim 12 wherein the panels comprise a substrate having a substantially reflective coating.

Claim 32. (New) Apparatus according to claim 31 wherein at least one of the panels is substantially absorptive to electromagnetic radiation.

Claim 33. (New) Apparatus according to claim 32 wherein the panels are generally planar.

Claim 34. (New) Apparatus according to claim 32 wherein the panels are generally curved.

Claim 35. (New) Apparatus according to claim 33 wherein the panels are irregular in shape.

Claim 36. (New) A method for reducing electromagnetic radiation reflected from at least one object in the direction of at least one electromagnetic radiation receiver comprising the steps of:

- i) determining a direction of each electromagnetic radiation receiver from each object;
- (ii) providing an array of at least one substantially reflective panel between each object and receiver;
- (iii) arranging each panel to reflect and disperse incident electromagnetic radiation away from each receiver.
